CIPHER Tech Recruitment

Participant Guide

1. What Happens on the Day

Part	What happens	Approx. time
1	Orientation, setup help and a live demo of the full workflow	15–20 min
2	**Build** your project with an AI-based IDE	about 1 h 15 min
3	**Push** to GitHub and **deploy** on Vercel, then submit	about 15 min

- Team CIPHER members are in the room the whole time. If you get stuck with a tool or the workflow, put your hand up. We will assist the query, not the project.
- Even if you are a beginner, do not worry. We run a demo and share this guide.

2. How You Will Be Judged

We look at **what you built** and **how you built it**.

- **Output:** what you built and how well it works.
- **Process:** how well you used AI to build it, as shown by your prompts, your decisions and how you guide the tool.

Using AI is expected and encouraged. We are looking for people who use it *well*, not people who avoid it.

3. What to Bring and Do Before Event

Bring: your own laptop and charger. If you do not have one, tell us in the WhatsApp group or arrange to borrow one from a friend.

Complete the checklist below at home:

☐ Install an AI-based IDE (we recommend **Antigravity**) and sign in with your Google account ∼15 min.

☐ Install **Git** (Git Bash on Windows) - easy setup. ∼5 min.

☐ Create a **GitHub** account ∼2 min.

☐ Create a **Vercel** account and connect it to GitHub ∼2 min.

☐ Do a full **practice run** with a tiny dummy project: prompt in the IDE → push to GitHub → deploy on Vercel ∼20 min.

The practice run is the single most useful thing you can do. Students who do it save a lot of time on the day.

You may use another AI-based IDE if you prefer, but you should be fully comfortable with it.

4. Guide A – Antigravity (Your IDE)

What it is: a code editor with an AI assistant built in. You describe what you want in plain English, a prompt, and it writes the code.

Setup

1. Download and install Antigravity: Download Antigravity IDE for Windows.
2. Open it and **sign in with your Google account**.
3. Make sure you can type a prompt and see the AI respond.

Create your first project

1. Create a new empty folder on your computer, for example `goal-tracker`.
2. In Antigravity, open that folder as your workspace.
3. Open the AI/agent panel and type your first prompt.
4. Open the generated `index.html` in your browser to see the result.

Tips for good prompts

- Be specific. Say what you want, what it should look like and how it should behave.
- Work in steps: get the main features working first, then improve the design, then add your own touches.
- Test what the AI gives you. If something is broken, describe exactly what happened instead of just saying it is not working.
- Make your own decisions. You are the one guiding the tool.

IMPORTANT: Save every prompt. Copy each prompt you give the IDE into a **`.txt` file**, in the order you gave them. Do it as you go. It is very hard to rebuild at the end.

5. Guide B – Git and GitHub (Saving and Sharing Your Code)

What they are: *Git* tracks your code. *GitHub* is the website where your code is stored online.

One-time setup

1. Install Git: Download Git for Windows.
2. Create an account at https://github.com.
3. Tell Git who you are (run once in Git Bash or your terminal):

```
git config --global user.name "Your Name"
git config --global user.email "you@example.com"
```

Create a repository

1. On GitHub, click **New repository**.
2. Give it a name, for example `goal-tracker`.
3. Choose **Public**. Team members must be able to view it.
4. Create the repository. Keep the page open; you will need its URL.

Push your project

Open a terminal inside your project folder and run:

```
git init
git add .
git commit -m "First version"
git branch -M main
git remote add origin <your-repository-URL>
git push -u origin main
```

If GitHub or Git asks you to sign in during `git push`, follow the prompts in the browser. Refresh your repository page to confirm the files are visible.
Pushing later changes:

```
git add .
git commit -m "Describe what you changed"
git push
```

Add a README. Create a file named `README.md` in your project with the project name, description, live link, and run instructions.

Keep it clean

- Never put passwords, API keys or tokens in your code or repository. This project does not need any.
- Keep file and folder names sensible, and do not upload unnecessary files.

6. Guide C – Vercel (Putting Your App Online)

What it is: a free service that turns your GitHub repository into a live website that anyone can open.

One-time setup

1. Go to `https://vercel.com` and sign up using **Continue with GitHub**.
2. Allow Vercel to access your repositories when asked.

Deploy

1. On Vercel, click **Add New** → **Project**.
2. Find your repository in the list and click **Import**.
3. Leave the default settings as they are.

4. Click **Deploy** and wait for it to finish.
5. Open the generated link ending in `.vercel.app` to verify the app works.

Updating your live app: push new changes to GitHub (`git add .`, `git commit`, `git push`). Vercel will redeploy automatically.
If something goes wrong: do not panic. Put your hand up. Common causes are the wrong folder being pushed, or the main file not being named `index.html`.

7. What You Will Submit

At the end of the session, submit these **three** things on the submission portal: https://forms.gle/hcFW63w94846sBF68

1. **GitHub repository link** (the repository must be public)
2. **Live project link** (the link from your deployment)
3. **Prompt log**: a `.txt` file with every prompt given to your IDE, in order

8. Finish-Line Checklist

☐ The app works on the live link, not just on your laptop

☐ The GitHub repository is **public** and has a README

☐ No keys or passwords in the code

☐ The prompt log is saved as `.txt` and is in order

☐ All three items are submitted

9. Need Help?

- WhatsApp group: https://chat.whatsapp.com/IB7BnVsFAoBBudqhPQjIRI?s=cl&p=a&mlu=4&ilr=4
- Contact: Omkar Deshmukh, +91 7218559768
- Contact: Preet Tank, +91 9309964817

All updates about the date, time and venue will be shared in the WhatsApp group. Please make sure you have joined it.

We look forward to seeing what you build. – Team CIPHER
